

Easy Prep Quick Start Guide

Fill with water to the max fill line (1.7L)

Set desired final water temperature. Our recommendation is 40-45°C, keeps the bottle warm (around body temperature), ideal for feeding

Press boil button for 2 seconds to purify water (once boiling is complete, the unit will cool down to previously set temperature)

Set your desired bottle water volume (either in oz or ml)
Add formula to your bottle and place on drip tray

Tap water button to dispense water, once complete, add lid and shake well and your bottle is ready to go

Your next bottle will be ready to go at the touch of a button, your Easy Prep will maintain your set temperature for 24 hours allowing you to make further bottles by just tapping the water button
